The purpose of the weekly *Influenza Watch* is to summarize current influenza surveillance in San Diego County. *Please note that reported weekly data are preliminary and may change due to delayed submissions and additional laboratory results.*

**Current Week 51 (ending 12/26/2015)**

- 43 new influenza detections reported: *Expected level*
- 4% influenza-like illness (ILI) among emergency department visits: *Expected level*
- 1 influenza-related death reported this week
- 8% of deaths registered with pneumonia and/or influenza: *Expected level*

### Virus Characteristics

- **Influenza A**: 44%
- **Influenza A (H3)**: 13%
- **Seasonal Influenza A (H1N1)pdm09**: 2%
- **Influenza B**: 33%
- **Influenza B/Yamagata**: 3%
- **Influenza B/Victoria**: 1%
- **Influenza A/B**: 3%

* FYTD=Fiscal Year To Date (FY is July 1 - June 30, Weeks 27-26). Total deaths reported in prior years: 97 in 2014-15, 70 in 2013-14, 65 in 2012-13.
* Previous weeks case counts or percentages may change due to delayed processing or reporting.
* Current FY deaths are shown by week of report; by week of death for prior FYs.
More People With High-Risk Conditions Need Flu Shots

During annual influenza epidemics, rates of serious illness and death are higher among those who have medical conditions, such as pulmonary disease (including asthma), diabetes, or heart disease. These conditions place individuals at an increased risk for influenza complications.

A CDC study, published online this month, examined data from the 2012-2013 Behavioral Risk Factor Surveillance System to estimate national and state-specific influenza vaccination coverage among people aged 18–64 years with high-risk conditions. The researchers found that influenza vaccination coverage was 45.4% among adults aged 18–64 years with at least one high-risk condition, compared with 32.9% among those with no high-risk conditions (p<0.05). Among adults aged 18–64 years with multiple conditions (at least two high-risk conditions), vaccination coverage was 53.2%. Coverage was 43.9% for those with pulmonary diseases, 52.7% for those with diabetes, 48.1% for those with heart disease, and 45.0% for those with cancer.

The researchers noted that Individuals with high-risk conditions were more likely to receive an influenza vaccine than those with no high-risk conditions, even after controlling for demographic and access-to-care characteristics. However, despite the observed higher vaccination rates and the ongoing influenza vaccination recommendations for adults with high-risk conditions, coverage in this study was below the Healthy People 2020 target of 70%. Primary care providers and subspecialists should ensure routine assessment of vaccination status every fall and winter, and encourage vaccination to people with high-risk conditions. For more information go to:

Influenza Vaccination Coverage Among People With High-Risk Conditions in the U.S.

Influenza Reporting in San Diego County

Local providers are encouraged to report laboratory positive influenza detections to the County Epidemiology Program by FAX (858) 715-6458. Please fax a Case Report Form and/or a printed laboratory result, and indicate if patient was admitted to ICU or died, and/or is a resident of a congregate living facility.

For questions regarding sending specimens to Public Health Laboratory (PHL), call (619) 692-8500. Click here for the updated PHL PCR Test Request Form.

Contact Epidemiology at (619) 692-8499 or by email to: EpiDiv.HHSA@sdcountry.ca.gov with questions.
