The purpose of the weekly *Influenza Watch* is to summarize current influenza surveillance in San Diego County. *Please note that reported weekly data are preliminary and may change due to delayed submissions and additional laboratory results.*

### Current Week 14 (ending 4/8/2017)
- 88 new influenza detections reported: *Expected level*
- 2% influenza-like-illness (ILI) among emergency department visits: *Expected level*
- 2 influenza-related deaths reported this week
- 7% of deaths registered with pneumonia and/or influenza: *Expected level*

### Current Season Summary
- **5,295** Total Cases
- **104** ICU Cases
- **82** Deaths
- **34** Outbreaks

### Virus Characteristics
- **79.9%** Influenza A
- **9.3%** Influenza A (H3) Seasonal
- **9.1%** Influenza B
- **1.2%** Influenza B/Victoria

### Table 1. Influenza Surveillance Indicators

</table>

* FYTD=Fiscal Year To Date (FY is July 1- June 30, Weeks 27-26). Total deaths reported in prior years: 68 in 2015-16, 97 in 2014-15, and 70 in 2013-14.
* Previous weeks case counts or percentages may change due to delayed processing or reporting.
** Includes FYs 2013-14, 2014-15, and 2015-16.
^ Current FY deaths are shown by week of report; by week of death for prior FYs.
Vaccine halves risk of death from flu in kids

A new study from the Centers for Disease Control and Prevention (CDC) published last week in *Pediatrics* is the first of its kind to show that flu vaccination significantly reduced a child’s risk of dying from influenza.

The study, which looked at data from four flu seasons between 2010 and 2014, found that flu vaccination reduced the risk of flu-associated death by half (51 percent) among children with underlying high-risk medical conditions and by nearly two-thirds (65 percent) among healthy children. During the study period, 358 laboratory-confirmed, flu-associated child deaths were reported to CDC. Of the 358 reported pediatric deaths with known vaccination status (291), only one in four children, or 75 (26 percent), had been vaccinated. Researchers estimated how effective the vaccine was at preventing flu-related deaths by comparing the vaccination status of the children who died from flu to comparison groups of children. The comparison groups were obtained from two national surveys and a database of commercial insurance claims.

The study findings underscore the importance of the recommendation by CDC and the American Academy of Pediatrics that all children 6 months and older get an annual flu vaccine.

Through April 1, 2017, 68 pediatric deaths have been reported to CDC for the current flu season. Two pediatric deaths have been reported so far in San Diego County this season, and there were two pediatric deaths here in the 2015-16 season.

The study is available at: [http://pediatrics.aappublications.org/content/early/2017/03/30/peds.2016-4244](http://pediatrics.aappublications.org/content/early/2017/03/30/peds.2016-4244). Information about pediatric deaths is available in an interactive format at [https://gis.cdc.gov/GRASP/Fluview/PedFluDeath.html](https://gis.cdc.gov/GRASP/Fluview/PedFluDeath.html).

Episode week is the week of symptom onset, or earliest available date in which the case is identified.

Influenza Reporting in San Diego County

Local providers are encouraged to report laboratory positive influenza detections to the County Epidemiology Program by FAX (858) 715-6458. Please fax a Case Report Form and/or a printed laboratory result, and indicate if the patient was admitted to ICU or died, and/or is a resident of a congregate living facility.

For questions regarding sending specimens to Public Health Laboratory (PHL), call (619) 692-8500. Click here for the updated PHL PCR Test Request Form. Contact the Epidemiology Program with any questions at (619) 692-8499 or by email to: EpiDiv.HHSA@sdcounty.ca.gov.
