The purpose of the weekly Influenza Watch is to summarize current influenza surveillance in San Diego County. Please note that reported weekly data are preliminary and may change due to delayed submissions and additional laboratory results.

Current Week 51 (ending 12/23/2017)
- 2,227 new influenza detections reported: Elevated level
- 7% influenza-like-illness (ILI) among emergency department visits: Elevated level
- 6 new influenza-related deaths reported this week
- 20 new ICU cases reported this week
- 6% of deaths registered with pneumonia and/or influenza: Expected level

</table>

* FYTD= Fiscal Year To Date (FY is July 1 - June 30, Weeks 27-26). Total deaths reported in prior years: 87 in 2016-17, 68 in 2015-16, and 97 in 2014-15.
* Previous weeks case counts or percentages may change due to delayed processing or reporting.
^ Current FY deaths are shown by week of report; by week of death for prior FYs.
Influenza Outbreak Control and Reporting

The recent surge in influenza cases in San Diego County documented in this issue of the Influenza Watch coincides with increased reports of outbreaks in local institutional settings. Preventing transmission of influenza viruses and other infectious agents within healthcare settings, including long-term care facilities (LTCFs), requires a multi-faceted approach that includes the following: vaccination, symptom monitoring, testing, infection control, antiviral treatment, and antiviral prophylaxis.

The San Diego County Public Health Officer recently sent a letter to LTCF administrators regarding influenza outbreak prevention, control and reporting. Useful resources highlighted in the letter include:

- **Recommendations for the Prevention and Control of Influenza in California LTCFs (CDPH)**
- **Influenza Outbreaks in LTCFs AFL 17-02 (CDPH)**
- **Toolkit for LTCF Employers (CDC)**
- **Interim Guidance for Influenza Outbreak Management in LTCFs (CDC)**
- **ACIP Recommendations on Prevention and Control of Influenza (CDC)**

Clinicians frequently have questions about the use of antiviral medications for influenza treatment and prophylaxis in LTCFs. CDC recommends that LTCF residents who have confirmed or suspected influenza should receive antiviral treatment immediately, even if laboratory confirmation of influenza is pending. CDC also recommends that all eligible residents in the entire LTCF (not just currently impacted wards) should receive antiviral chemoprophylaxis as soon as an influenza outbreak is identified.

The latest CDC antiviral recommendations are available on the [CDC influenza antiviral drugs web page for health professionals](https://www.cdc.gov/influenza/antivirals/). Clinical practice guidelines on the diagnosis, treatment, chemoprophylaxis, and institutional outbreak management of seasonal influenza from the Infectious Disease Society of America may be found [here](https://www.cdc.gov/influenza/). Outbreaks should be promptly reported to the County Epidemiology Program at (619) 692-8499.

Influenza Reporting in San Diego County

Local providers are encouraged to report laboratory positive influenza detections to the County Epidemiology Program by FAX (858) 715-6458. Please fax a Case Report Form and/or a printed laboratory result, and indicate if the patient was admitted to ICU or died, and/or is a resident of a congregate living facility.

For questions regarding sending specimens to Public Health Laboratory (PHL), call (619) 692-8500. Click here for the updated PHL PCR Test Request Form. Contact the Epidemiology Program with any questions at (619) 692-8499 or by email to: EpiDiv.HHSA@sdcounty.ca.gov.
